Siemens control

Special versions on request

Characteristics

- the PULL-OVER works with usual PE-shrink foil hoses.
- The foil cut device is placed above the packaging unit (palett)
- The foil bag hose will be opened by pneumatic guides so that it is possible that the pneumatic grippers will take the foil bag and put it completely over the palett.
- The complete machine is very sturdy and suited for highest performance
- Further foil sizes can be treated with an additional reeling device
- All drives are controlled by frequency inverters

Options

- Further foil sizes with automatic size change
- Palett conveyer inside the plant.
